

NEW! Keravive HydraFacial Scalp Treatment

HydraFacial Keravive is a new and unique treatment designed to cleanse, stimulate, nourish and hydrate the scalp. It's like a facial for your hair. The treatment combines the patented Vortex technology that made the original Hydrafacial so popular with a new Keravive Peptide Complex. Keravive's restorative scalp health effects can be enjoyed alone or as complement to treatments for hair loss.

Your Keravive treatment begins as you relax comfortably against a towel. Settle in for a gentle scalp massage using our specialized wand. The Vortex technology extracts dirt, oil and other impurities from the hair follicles and the surface of the scalp, while simultaneously promoting blood circulation. This step prepares your scalp for the application of the Keravive Peptide Complex.

It's a blend of growth factors, peptides and skin proteins known to be lacking in people with thinning or damaged hair, including epidermal growth factor (EGF), basic fibroblast growth factor (BFGF), vascular endothelial growth factor (VEGF) and Thymosin Beta-4. The Keravive Peptide Complex also contains panthenol, which is a vitamin B5 derivative that encourages moisturizing, and arginine, which builds keratin and skin collagen properties. **This potent serum is 200 times more concentrated than any other hair treatment on the market today.**

After the Keravive serum is applied to your scalp and hair follicles for infusion, the spa treatment ends with a relaxing scalp massage. Be sure to use your take-home product once a day to enhance your treatment results. The Hydrafacial Keravive Peptide Complex Spray contains a less concentrated form of the blend applied to the scalp during the actual treatment. As you continuously use the spray in-between visits, it encourages scalp stimulation and prevent the onset of flakes and skin dryness.
